

MITEL NP View

MULTIMEDIA MESSAGING ON YOUR PC

With NP View, multimedia messaging becomes a reality by bringing voice and fax messages to the PC. The combined power of NuPoint Messenger™ and NP View allows PC users to create, send, receive, and store voice and fax messages with a click of the mouse. This integration of multimedia messaging on the desktop means higher levels of productivity for users through significant time savings.

NP View also lets you choose where you do your messaging. Using a PC, users have complete NP View capabilities anytime, anywhere – so your office is wherever you are.

ONE INBOX FOR ALL MESSAGES

NP View gives users a single inbox window where all messages arrive. Messages in your inbox are displayed in an easy-to-read list. Graphic icons tell you if you have received a voice, fax, or compound message. Simply double-click on a message in the inbox to listen to a voice message or view a fax. You can sort messages by the senders' names or by the time and date the messages arrived. You can also search for a key word in the message subject line. This lets you quickly sort through a list of messages and go straight to the ones that matter most.

MESSAGES MADE EASY

Sending messages is just as simple. Quickly address a message by clicking on a name or a distribution list from your personal or corporate address book, and send the message to any mailbox, phone, or fax machine. NP View voice messages can be played and recorded through the telephone or through your PC sound system.

FAXES MADE SIMPLE

Integrated fax messaging means faxes can be viewed on your PC screen and printed out when and where you want – at any networked laser printer or fax machine you choose. This protects the confidentiality of faxed information and makes accessing faxes easier than ever. With a click of the mouse, view the fax, reply to the sender, or forward it to other users. NP View fax broadcasting feature lets you send a fax to everyone on a distribution list. And because faxes are delivered through the server, NP View eliminates the need for personal fax boards and extra phone lines.

COMPOUND MESSAGING

Add a voice message to your fax message in one easy step with NP View. Just click on the 'Make' message icon to bring up the recorder and then use your microphone to record your message. The recipient can view your fax, page through it, and zoom into sections of interest while listening to your detailed comments via the voice message.

INTEGRATED WITH THE DESKTOP

With NP View, messages can be downloaded onto your PC and saved in Windows® folders using standard file formats so you can archive messages for future reference. You can also drag-and-drop voice and fax messages directly into other documents including Word™ files and Excel™ spreadsheets. Version 1.4 NP View is compatible with Windows 95, 98, 2000 and NT Workstations. NP View also makes it easy to manage your mailbox. There's a separate window for mailbox administration with clearly marked buttons for each function. A point-and-click interface lets you easily create up to 200 distribution lists from either your personal address book or the corporate directory. You can also modify your password, set up your default fax delivery preferences, change your recorded name or greetings, or adjust your pager settings.

NP View makes multimedia messaging a reality by bringing voice and fax messages to the PC.

OPEN SYSTEMS

We are committed to an open messaging environment. This means you get the convenience and security of NP View without changing your current office systems. You also have the confidence that the platform will adapt to the changing needs of your office environment.

EXTENDING THE BOUNDARIES

With products like NP View, we are changing the way the world manages information – making it easier, faster, and more efficient.
